

To the Energy Policy Committee Members:

My name is John Diehl from Ingham County. I have a mentally and physically disabled child. I have strong concerns with the implementation of 5G Cell Towers in front of homes through neighborhoods in Michigan, as well as all main streets in our Michigan towns and cities. Once implemented, no one will be able to get away from the wireless radiation emitting from these 5G Cell Towers.

Over 10,000 peer reviewed scientific studies over the course of 30 years show that the technologies and frequencies used in 5G and wireless technologies are harmful to human health.

The U.S government's own 25 million dollar National Toxicology Program (NTP) study released in March 2018, shows that the same wireless technologies used in 5G are conclusively DNA breaking and cancer causing. These findings were also found and released in studies by the Ramazzini Institute soon after.

Hundreds of doctors, scientist and health organizations around the world are banning together to sound the alarm and educate others regarding the significant public health dangers associated with the use and expansion of wireless technologies and infrastructures.

SB 637 would clear the way for 5G rollout statewide and SB 894 would prohibit local "elected" governing bodies from exercising their rightful control in this matter.

The bills set precedence for complete corporate control at the expense of individual/municipal/state rights. This established precedent will be legally justifiable and followed by other companies such as cable companies that also have interest in our public rights of ways.

We cannot afford to allow any corporation to have this level of power and control over our property, municipalities or state rights. Our rights (individual, municipal, state) have to be completely preserved and remain intact in all legislation and in all deals with corporations. This needs to be a foundational standard for all legislation and corporate deal structures.

Children, the elderly, and our disabled population are the most vulnerable to micro-wave radiation from the 5G cell Towers. If 5G Cell Towers are truly dangerous and are put up in neighborhoods throughout Michigan, as well all our main streets in our cities and towns, no one will be able to get away from the effects of these towers. This can create great harm to Michigan's public and result in huge medical costs and lawsuits.

Please call for a moratorium on 5G Cell Tower deployment to give time for appropriate study of the dangers of wireless radiation, and do not take away our local government rights and give them to the telecom companies. Do not pass SB637 & SB894.

John Diehl
